AMOS Project 1 - Planning Documents

Team Contract

| Goals | Working deliverables |
|---------------------------|--|
| | 80% Test Coverable (Decide what kind of tests we will have?) |
| | Everyone will learn how to work in an agile Team. |
| | Max 60 minutes meetings |
| Meeting norms | One meeting per week (Thursday 12:30 pm). |
| meeting norms | Sub teams can meet more often. |
| | Meetings are mandatory. |
| | Being late is acceptable with good reason behind it (better to communicate it before the meeting). |
| Working norms | We will separate ourselves into sub teams. |
| - | each sub will decide about their part in the project |
| | Be open to feedback |
| | Deliverables must be made until wednesdays 8 p.m., such that one person can upload the final version |
| Coordination norms | No moderator in meetings (One person reminds others to "focus" if the conversation goes off track) |
| | Feel free to ask for help/second opinions |
| Communication norms | Discord outside of meetings |
| | Try to check Discord every day |
| | @ somebody if faster feedback is needed |
| Consideration norms | Disagreements are solved democratically in the smallest possible team/subteam |
| | Side convos are fine |
| Cont. improvement norms | Tracking is not strict, we estimate the tickets and track the estimated progress by burnt story points |
| | Ask the stakeholder in the progress tracking |
| Rewards | Beer, Radler, Alster or any non-alcoholic beverage |
| Sanctions | Kick a member from the group after repeated failure of communication |

AMOS Project 1 - Planning Documents

Product Glossary

| Term | Definition |
|----------------------------------|--|
| Component | One of the three runtime components (Frontend, Backend or NLP Component) |
| external API | public API for routing, geographical or topological search, attached to Backend |
| Named Entity Recognition, NER | technique of NLP, extracts previously defined entities (e.g. places, persons) |
| Natural Language Processing, NLP | process consisting of multiple subroutines (e.g. preprocessing, NER, Intent Detection) - which subroutines are executed depends on the respective use case |
| Preprocessing | subroutine of NLP, describes multiple steps of data preparation through text transformation |
| Postprocessing | subroutine of NLP, analyzes the text after labels (e.g. dor NER or Intent Detection) were set |
| (user) search query, user input | term the user searches for through the Frontend text input field (or perhaps with voice input) |
| | |
| | |
| | |
| | |

AMOS Project 1 - Planning Documents

Product Goal

| Product Vision | Project Mission |
|--|--|
| | |
| The Geo Data Search Project will allow companies worldwide to find desired testing routes for their newest prototypes, matching geographical properties like elevation, length and gradient as close as possible. The same parameters may be used to find various routes for cyclers, joggers or even ambitious wine enthusiasts looking for the optimal place to set up a winery. A user can conveniently input their search query by voice or via text be it on mobile, tablet or desktop. | The project mission is to achieve an interpretation of buzzword user queries in German through a web interface concerning location, length, height (difference) of public routes, places and regions. Multiple results, routes or places, matching the user query as close as possible will be displayed in a list as well as in a map. The software should be usable from desktop web browsers and be intuitive - an option to get examples for possible inputs in the web interface will be provided nevertheless. |

|----|-------------------------------|--|--|---------------------|-----------------------|------------------------|-----------------------|---------------|
| | Finish planned implementation | | Total of Hallo | (Fouture) | (0): | (1 501015) | (0): | |
| | | Finish Backend, Implement result list ranking in Frontend, make irregular deliverables | | | 14+X | | | |
| | | | Implementation of result list ranking 2/2 | 8 | 3 | | | |
| | | | Interface extension: result list gets priorities | 3 | 1 | | | |
| | | | Implement ranking in UI | 3 | 1 | | | |
| | | | Complete still open tasks | tbd | | | | |
| | | | Demo Day Video | | | | | |
| | | | Demo Day Slides | | | | | |
| 13 | Clean up and fix | | | | | | | |
| | | Fix known bugs, Finish posptoned tasks, make irregular deliverables | | | tbd | | | |
| | | | tbd | tbd | | | | |
| | | | Finish documentation | | | | | |
| 14 | Report, Retrospective | | | | | | | |
| | | Make irregular reliverables | | | | | | |
| | | | Project Summary | | | | | |
| | | | Project Retrospective | | | | | |

AMOS Project 1 - Planning Documents

Definition of Done

| # | Feature Definition of Done | Sprint Release Definition of Done | Project Release Definition of Done |
|---|--|---|---|
| | | All originally planned Tickets have been accepted | |
| 1 | Code was reviewed by at least one person | in the sprint review | User documentation is available |
| | | If documentation was needed - It's committed | |
| 2 | Git CI runs successfully | and pushed to github | Developer documentation is available |
| 3 | Feature is merged into main branch | Sprint Release is present and tagged | Test coverage above 50% |
| 4 | | | No started but not finished tasks available |

AMOS Project 1 - Planning Documents

Impediments Backlog

| Sprint | Status | Source | Impediment | Resolution |
|--------|----------|---------------|--|--|
| 1 | Resolved | Lukas Meister | Some team members were absent from the first team meeting without notifying anyone. | Everyone manages to consider the team meetings and notifies the team ahead of time if attendance is not possible. |
| 1 | Resolved | Lukas Meister | More additional group meetings necessary in order to coordinate the team work and specific tasks. | Weekly group meetings set up, with an extra meeting with the client every friday. |
| 2 | Resolved | Lukas Meister | Break down complex tasks into more managable, smaller tasks and assign them to a specific sub-group. | Continous effort: Tasks will be devided into smaller tasks and assigned to the respective sub-group. |
| 3 | Resolved | Lukas Meister | POs had to wait longer periods of time for replies to their questions or for tasks to be done, could not reach out to team members properly. | Team members have been alerted to reply appropriately and support POs in their tasks. |
| 3 | Resolved | Lukas Meister | One team member had too many assigned tasks and did not feel comfortable with the amount of new input to be processed. | POs broke down the respective team members tasks and offered help for the specific topic. |
| 5 | Resolved | Lukas Meister | A change in the sub-teams was needed to replace one team member that would not be available for the week in order to still get the necessary work done. | The backend team received an additional member and was able to successfully complete all relevant tasks. |
| 5 | In-work | Lukas Meister | One team member proposed to start development phase within a sprint a bit earlier so that work wouldn't pile up at the end of a sprint and risk a bad release. | Development phase started right away and ensured timely progress within the sprint. This will be an ongoing task to be looked after. |
| 5 | Resolved | Lukas Meister | One team member/PO would not be available the coming week, replacement for PO tasks and release manager needed. | Replacement found and did a great job! |
| | | | | |
